The compensation magnet increases the sensitivity and reduces the magnetic strayfield and allows use in close proximity to CRT screens.

A fine mesh grid protects the diaphragm.

Stiff and stable rear chamber with optimal acoustic damping allows the tweeter to be used with moderately low crossover frequencies.

This revolutionary DXT® tweeter addresses the major issues regarding directivity control in traditional loudspeaker designs. DXT® solves several well-know issues regarding; directivity control, off-axis response, integration with midrange units and baffle diffractions.
